

Purge Palantir Fact Sheet

US Deportations

- During 2011-2026, ICE [awarded](#) Palantir contracts worth over a combined \$287 million, and the company [won](#) a blanket purchase agreement from DHS worth up to \$1 billion in February 2026. ICE has [used](#) Palantir's tools to conduct [workplace raids](#), [deportations](#), and [family separations](#).
- Palantir's flagship deportation-support system is ICE's **Investigative Case Management** (ICM) system. ICM [gives](#) every ICE agent access to "a network of federally and privately owned databases of people's information." It [profiles](#) people and makes them easily [searchable](#) by combining many data points, including a person's immigration history, employment history, biometric identification, location data, financial activity, license plate number, as well as integration with information collected by data brokers such as social media profiles and family relationships.
- In April 2025, ICE [awarded](#) Palantir a \$30 million contract to enhance ICM with **ImmigrationOS** (Immigration Lifecycle Operating System). This enhancement identifies visa overstays, facilitates targeted arrest operations based on enforcement priorities, tracks "self-deportations" in near real time, and furthers streamline and scale deportation logistics.
- Another ICM-app is called **ELITE** (Enhanced Leads Identification & Targeting for Enforcement), which Palantir [designed](#) for ICE in September 2025. ELITE "populates a map with potential deportation targets, brings up a dossier on each person, and provides a 'confidence score' on the person's current address." This tool helped ICE plan [Operation Black Rose](#) in Oregon in October 2025.
- During the 1st Trump administration, ICM was instrumental for ICE operations at the height of its "[zero-tolerance policy](#)," which **separated thousands of children from their families**. Palantir's system was [used](#) to target and arrest family members who came to inquire about their children who crossed the border unaccompanied. ICE [arrested](#) hundreds of people in this way, prolonging the children's detention.
- Another key system that Palantir developed for ICE is called **FALCON**. It allows agents in the field to [search](#) for people's names, known locations, vehicles,

passport information, and hour-by-hour GPS location using cell tower data. Palantir's AI software also [processes](#) tips submitted to ICE.

Israeli Military

- Shortly after Israel began its [genocidal war on Gaza](#) in October 2023, Palantir [entered into](#) a “strategic partnership” with Israel’s Ministry of Defense to help the “war effort.” The Israeli military [reportedly](#) used Palantir tools during multiple raids in the Gaza Strip.
- Israel also [relied](#) on Palantir in its September 2024 attacks in Lebanon using exploding electronic pagers and radio devices, which killed dozens and wounded thousands of people. While most casualties were members of the armed group Hezbollah, at least a dozen unarmed civilians were also killed.

US Military Contracts

- The U.S. Department of Defense (DOD) is by far Palantir’s [largest client](#) within the U.S. federal government, and likely Palantir's largest client altogether. Between 2008 and February 2026, the DOD [awarded](#) the company contracts collectively worth over \$2.1 billion.
- Palantir’s Maven Smart Systems [identified](#) the targets for the U.S. attacks on Iran, likely including the bombing of an elementary school that killed at least 175 people, including scores of elementary-school-aged children. Maven is an AI-powered surveillance platform that Palantir built for the DOD to suggest bombing targets as well as track vehicles and people. The US military has [used](#) Maven throughout the Middle East.
- The U.S. Army [opened](#) an enterprise agreement with Palantir worth up to \$10 billion between 2025 and 2035. This agreement [combines](#) 75 new contracts for Maven, as well as software for supply chains, logistics, and consolidated histories of each Soldier’s personal information.
- Palantir [powers](#) the Gaza Civil-Military Coordination Center, the U.S. military compound set up in October 2025 to execute the Trump administration’s plan for Gaza. February 2026 reports showed the company [tracking](#) humanitarian aid in Gaza at this compound.
